

Integration Bee 2024: Instructions for participants

1. Participants compete with each other two at a time, and each is assigned one board randomly. Each participant is also assigned a pair of judges who will focus on them.
2. Each pair of participants will be given 1 integral to solve at a time. The first to complete an integral correctly wins 1 point. A participant may indicate that they have found a solution to an integral by writing their final *answer enclosed in a box*.
3. When any participant presents a solution, the timer stops and the judges check the presented integral. A solution will be deemed to be correct if both judges assigned to them come to a consensus on the correctness of the answer.
4. When a final answer is presented, the other participant may continue while judges come to a consensus, regardless of whether the presented solution is correct or not. If the solution is incorrect, the timer continues again and the participant (for whom the timer was first stopped) may continue trying to find the right answer. *Notice that you may not write while your answer is being judged.*
5. You do not need to include constants of integration in your solution.
6. The participant who receives the best score after 3 integrals, wins that match. In case of a tie, the participants are given a reserve integral. These will act as a tie-breaker.
7. There will be a 4 minute writing-time limit for integrals in round 1, a 5 minute writing-time limit for round 2 and a 6 minute writing-time limit for the final round, but the time spent by another participant while one is being judged, is considered "free time".
8. A hint may be presented if both participants agree that they want one.
